

HARIS NAVEED

Back-End Developer | Ruby on Rails | API & LLM Integration | Healthcare Tech

Lahore, Pakistan | (+92) 323-3666368 | harisnaveed123@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Back-End Developer with 2 years of experience building and maintaining production Ruby on Rails applications. Background includes designing ETL data pipelines, integrating healthcare and third-party APIs, and shipping early-stage LLM-powered features. Comfortable working across the full development lifecycle, from database design to deployment.

PROFESSIONAL EXPERIENCE

Devstax — Ruby on Rails Engineer

Oct 2025 – Present

- Integrated LLM APIs to automate text processing of unstructured medical documentation, using custom prompt structures and JSON parsing to extract key clinical attributes cutting manual document review time by approximately 50%.
- Implemented asynchronous webhook and API integrations for prior-authorization platforms (Agadia/PromptPA) to track real-time case status transitions, accelerating case turnaround time by over 40% and eliminating manual status-tracking errors.
- Designed an ETL ingestion pipeline (using the Roo library) that automated the processing and normalization of 10,000+ drug NDC records, replacing a multi-hour manual data-entry process with a 2-minute automated upsert routine.
- Engineered high-performance backend services in Ruby on Rails using Sequel ORM in place of standard ActiveRecord optimizing heavy queries to sustain smooth throughput for high-volume data streams.

Oasis Tech Labs — Full-Stack Developer

July 2024 – Sept 2025

- Maintained 2 core web applications and owned end-to-end delivery of 4 major user-facing features, including an internal dashboard overhaul and a secure checkout integration; resolved persistent N+1 query issues and added targeted indexing, cutting average API response times by 30% on high-traffic endpoints.
- Worked within a 6-developer, 1-QA, 1-PM Agile team, shipping 25+ production-ready feature tickets and bug fixes across bi-weekly sprints.

KEY PROJECTS

Medmonk — Healthcare Prior Authorization Platform | Ruby on Rails, MySQL, React

- Processed a steady baseline of 1,500+ active prior-authorization cases weekly across a catalog of hundreds of specialty medications.
- Replaced manual API polling and status checks with an event-driven webhook listener (deployed on Heroku) that automated real-time case-state transitions, cutting turnaround time by 40% (~1.5 days per case) and eliminating data latency from missed manual tracking.

LeafyNests — Farm Management System | Ruby on Rails, PostgreSQL, JavaScript

- Scaled to support 50+ farm and livestock modules, tracking 5,000+ crop, livestock, and maintenance records.
- Replaced manual data entry with an on-site QR code scanning layer, cutting daily operational logging time by 60% (from ~15 minutes to a 5-second scan).

Oasisbnb — Property Rental Platform | Ruby on Rails, MongoDB, JavaScript

- Built a full-stack rental platform supporting 3 regional test markets and 500+ mock property listings, simulating concurrent reservation logic across hundreds of test bookings.
- Delivered as a 3-developer capstone project over a 4-week sprint cycle, with database constraints designed to prevent double-bookings.

TECHNICAL SKILLS

Languages: Ruby, Python, JavaScript, C++

Frameworks & Libraries: Ruby on Rails, RSpec, Sidekiq, React.js

Databases: PostgreSQL, MySQL, MongoDB

Tools & Platforms: Git, GitHub, Linux

EDUCATION

Bahria University — Bachelor of Science in Computer Science

Sep 2020 – Jul 2024
